@ArctiqTeam

What are we looking to Solve?

Consistency

Error Mitigation

Agility and Efficiency

Active Documentation

Automate Issue Resolution

A New Perspective on Network Management

The Basics

Configuration Management tool

Open Source

Agentless

Low barrier to entry

Wide array of use-cases and modules

Enterprise Offering (Ansible Tower)

What's New from Ansible

Resource modules

Aggregate resources

Declarative intent

Additional platform support and modules

New network connection types

F5 for Network Automation

iControl REST API

Native Ansible Modules (65+)

Super-NetOps

Automation for the Entire Application

Ecosystem

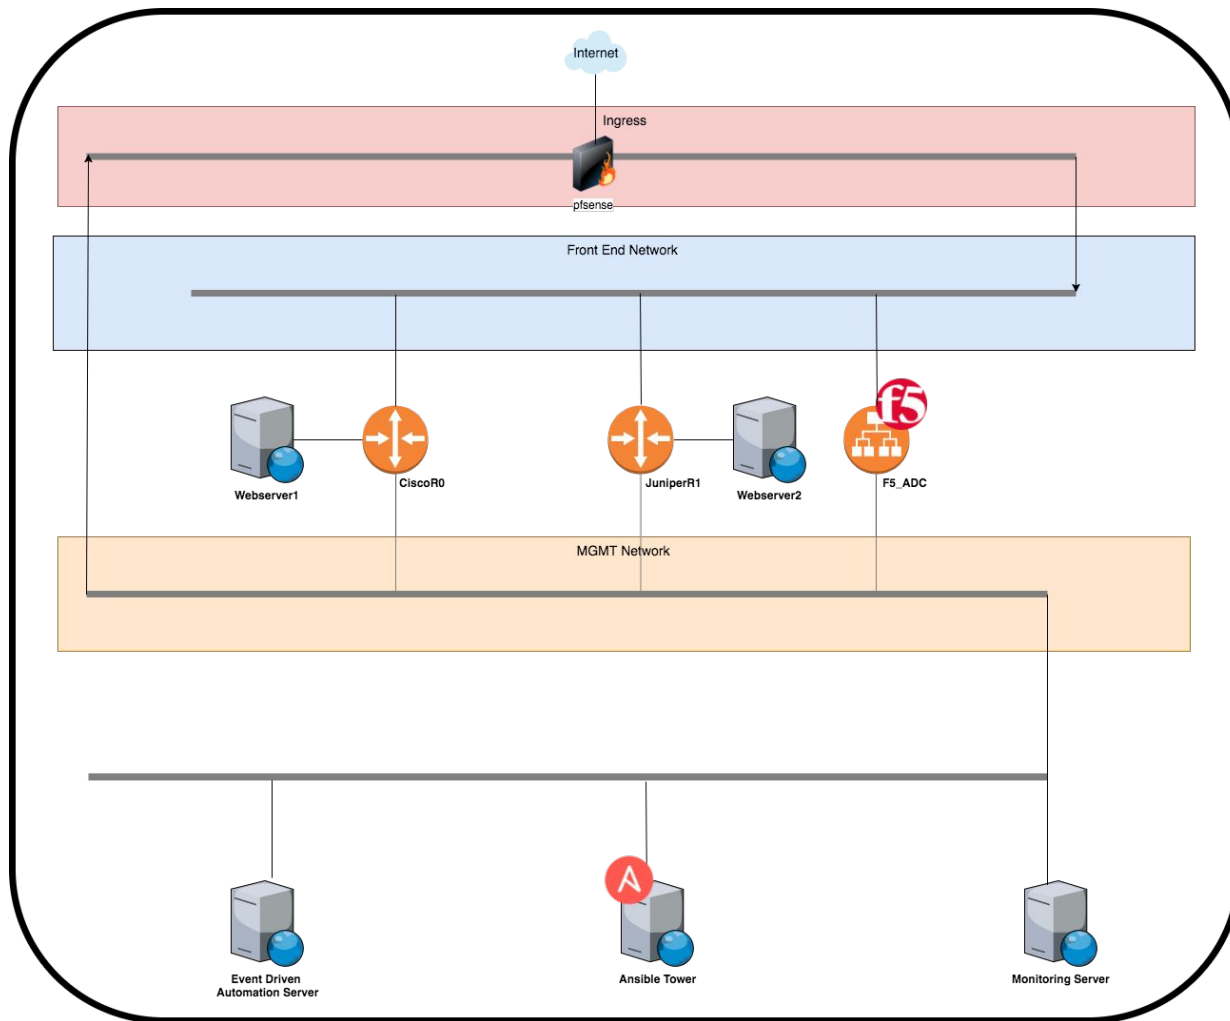

Integrate into Existing Pipelines

INTELLIGENT ARCHITECTURE

Self-Healing Networks - See it in action ...

Use Case 1: Lab Reset and Standup with Ansible Tower

A rectangular road sign with a black border and a yellow background. The sign is divided horizontally by a diagonal red line. The word "NOW" is written in large, bold, dark blue capital letters above the line. The word "Later" is written in large, bold, dark blue capital letters below the line. The sign is mounted on a metal pole. The background is a clear blue sky with some light clouds at the bottom.

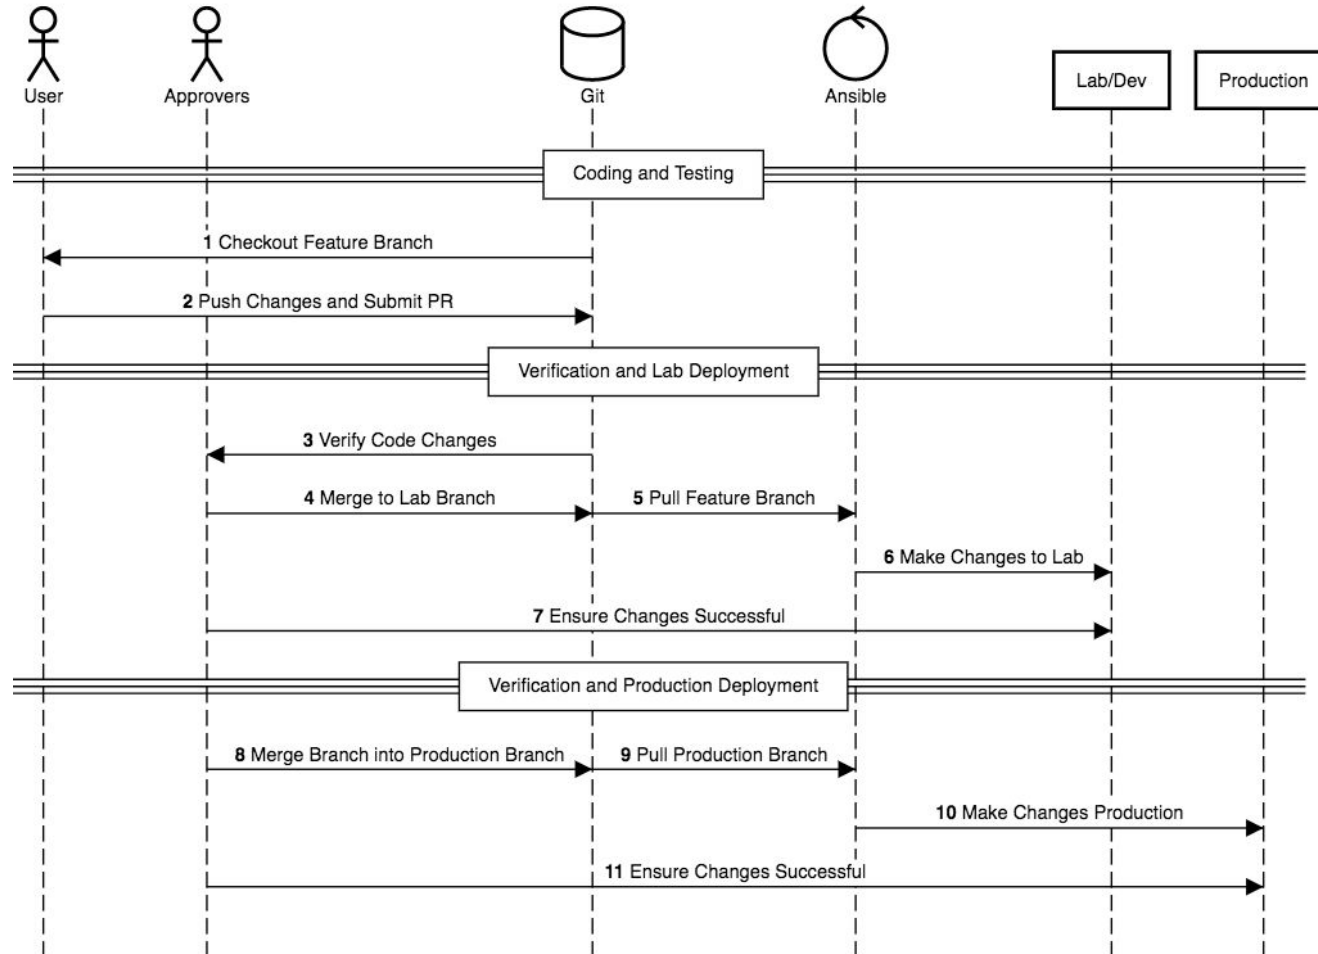

Use Case 1 - Demo

NOW

Later

Use Case 2: Webhook Integration - Git laC

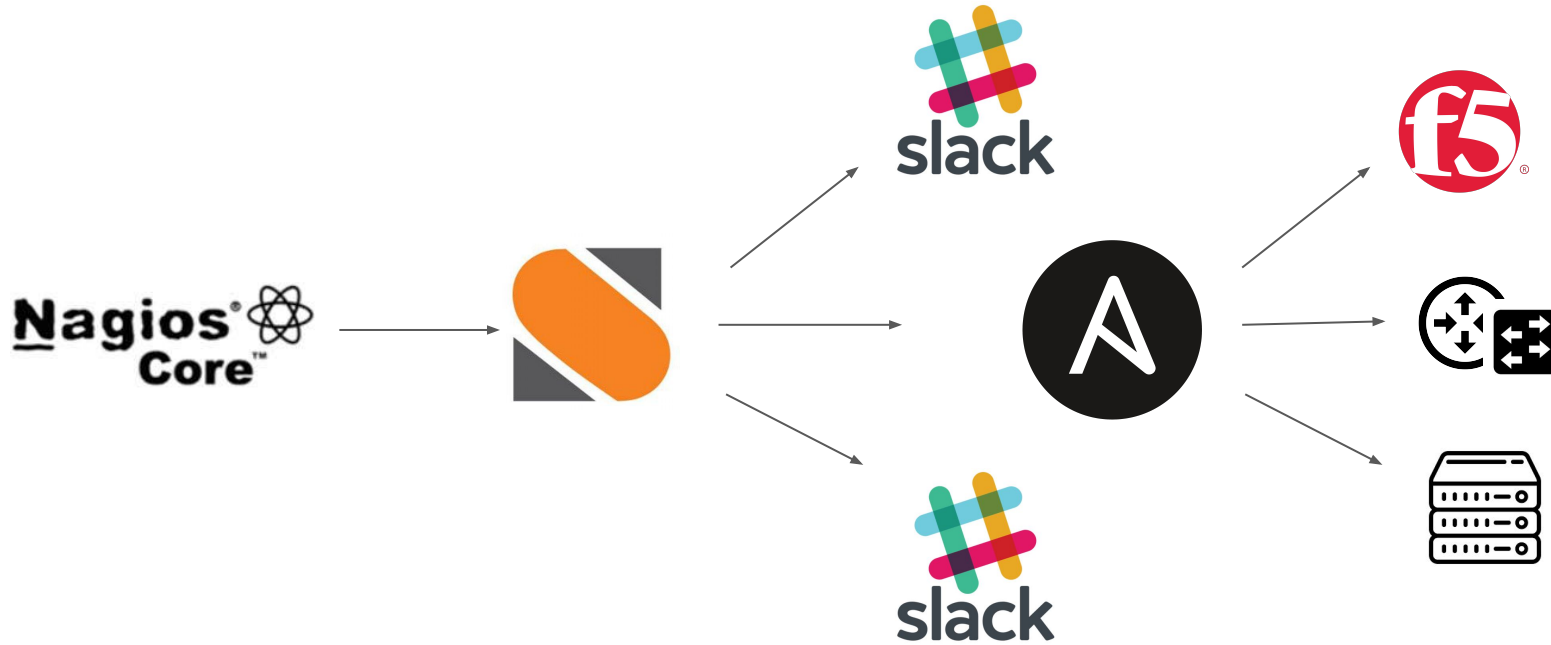

Git/Ansible Network Workflow

A blue-tinted photograph of a Volkswagen Beetle in a cluttered garage. The car is parked in the center, with its rear facing the viewer. The license plate reads "DINOCAR". To the right of the car, a person is lying face down on the floor, wearing dark clothing and boots. The background is filled with shelves and boxes, suggesting a storage or workshop area. The overall mood is somber and mysterious.

Use Case 2 - Demo

Self Healing Workflow

Use Case 3: Catastrophic Network Failure / F5 VIP down

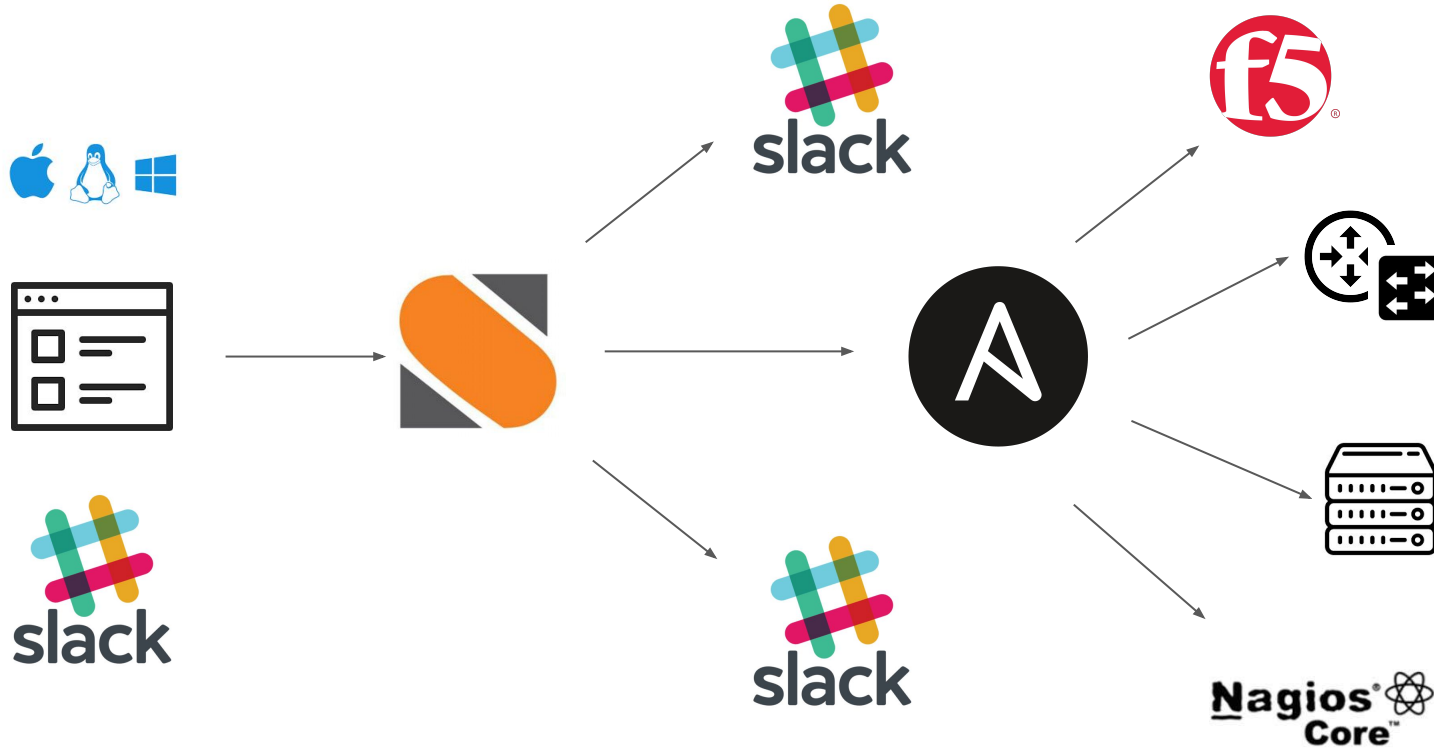

Use Case 3 - Demo

Use Case 4: WebApp Integrity Enforcement

Use Case 4 - Demo

Automated Provisioning Workflow

Where are we headed?

**Soooo many more apps
(microservices)
With much more Open
Source
Demanding deeper
application visibility**

Enterprise Support for Open Source Solutions

redhat®

Integrate F5 ADC into the development workflow

ASPEN MESH

Additional Use Cases:

- Dynamic Network Configuration**
- Pipeline / Release Management**
- Self-serve provisioning portal**
- Full Stack Deployments**

The background of the slide is a close-up photograph of an artist's palette and several tubes of paint. The palette is covered in various colors of paint, including red, yellow, and blue. There are several tubes of paint, some of which are squeezed out, and a paintbrush is visible. The entire image is overlaid with a semi-transparent blue filter.

Get Creative - It's the ONLY Limitation

Find a Use Case
Convert MOPs into Playbooks
Low Barrier to Entry

THANK YOU
